* NY - NY actually reports receiving 104,000 tons of MSW from CT, however it's been determined that 8,268 tons was pass-through waste that was originated in New York.
 NY's numbers represent the total waste imported to NY disposal facilities by state. The numbers provided did not break out between type of facility (landfill vs. incinerator).
 MSW imported to Seneca Meadows landfill from CT was estimated based on the TOTAL amount of waste imported to this landfill from CT, therefore, the data from CT was used instead because it is believed to be more accurate.
 Likewise, NY only reported receiving 22,000 tons of MSW from VT, but one landfill VT exported to did not report, so it is believed that the VT number is more accurate.
