

PERMEABLE REACTIVE BARRIERS (PRB)

- A PRB is a continuous, in-situ permeable treatment zone designed to intercept and remediate a contaminant plume.
- Contaminants may be treated through physical, chemical, and/or biological processes.

PERMEABLE REACTIVE BARRIERS (PRB)

Permeable

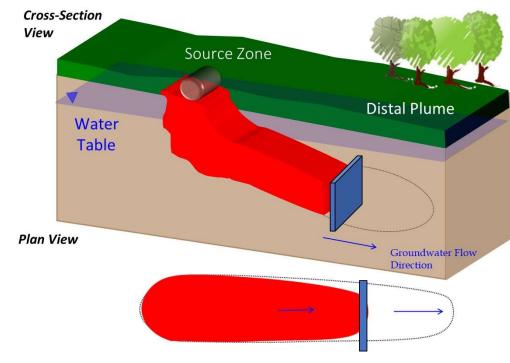

- Groundwater flows through
- Hydraulically passive
- Can be designed to be more permeable than the surrounding aquifer media

Reactive

 Reduce groundwater concentrations within PRB

Barrier

 Prevent contaminants from migrating beyond

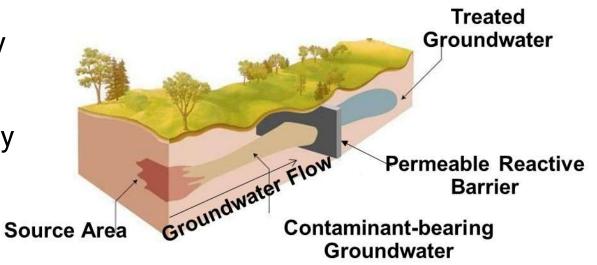

www.isotec-inc.com

FULL SERVICE ENVIRONMENTAL REMEDIATION SINCE 1995

PRB REAGENT CHARACTERISTICS

- Persistent (years)
- Immobile or Limited Mobility
- Does not reduce permeability
- Solid or liquid reagents
 - Gas sparge curtain
 - Electrochemical (E-Redox®)

(ITRC, 2011)

APPLICABLE CONTAMINANTS

- Organic
 - Chlorinated VOCs
 - Petroleum hydrocarbons
 - Energetics (TNT, RDX)
 - 1,4-Dioxane
 - PFAS
- Inorganic
 - Nitrate
 - Metals
 - Arsenic
 - Radionuclides

Attenuation – PRB reduces contaminant mass (degradation, transformation)

Retardation – PRB removes contaminant from mobile form (precipitation, sorption)

Reversible processes

PRB REAGENTS - CHEMICAL REACTIVE

- Chemical Oxidation
 - Potassium persulfate
- Chemical Reduction
 - Zero valent iron (ZVI)
- pH Adjustment (metals)
 - Limestone

FULL SERVICE ENVIRONMENTAL REMEDIATION SINCE 1995

PRB REAGENTS - ENHANCE BIODEGRADATION

- Bioremediation (Anaerobic)
 - Wood chips, mulch
 - Carbon substrate e- donor
 - (e.g., emulsified vegetable oil)

- Oxygen release compounds (e.g., calcium peroxide)
- Gas (Air Sparge / Biosparge)
 - Air / oxygen
 - Methane, propane

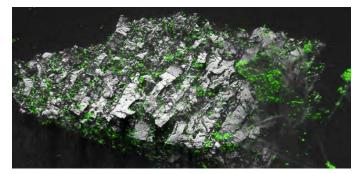

PRB REAGENTS - SORBENTS

- Activated Carbon
 - Granular (GAC)
 - Powdered (PAC)
 - Colloidal

1 lb. contains surface area to cover more than 90 soccer fields

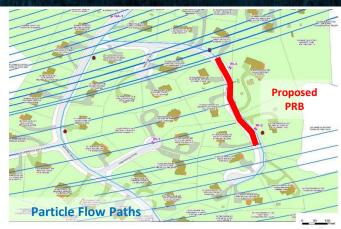

- Zeolite (aluminosilicate minerals)
- Modified Clay
- Combinations
 - Activated carbon + clay minerals

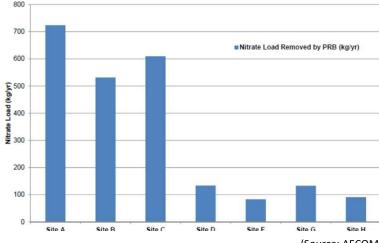

LOCATING A PRB

- Location where reducing contaminant flux will support remedial goal
 - Flux [mass/time] = Concentration x Flow
- Perpendicular to groundwater flow (or near perpendicular)
- Access / Land Usage
- Downgradient Features

(Source: AECOM)

PRB PLACEMENT

 PRBs located according to remediation objective(s)

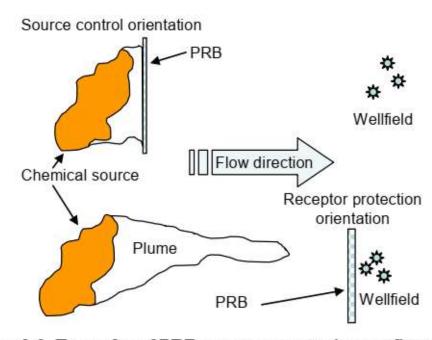

Figure 3-2. Examples of PRB receptor protection configurations.

(ITRC, 2011)

PRB versus TRANSECT

- Transect a line of injection points for a mobile reagent
 - (e.g., permanganate, sodium persulfate, e⁻ donors)
 - Not a Permeable Reactive Barrier

GW Flow Direction

Line of injection points located upgradient of building wall to apply oxidant to advect towards contamination under the building

www.isotec-inc.com

PRB INSTALLATION METHODS - SOLID SUBSTRATES

Trenching

Excavator

Max. 18-25 feet deep

One-pass trenching

■ 30 – 75+ feet deep

www.isotec-inc.com

FULL SERVICE ENVIRONMENTAL REMEDIATION SINCE 1995

PRB INSTALLATION METHODS - SOLID SUBSTRATES

Auger Boreholes (~12")

Cornell Cooperative Extension of Suffolk County (NY) – Molly Graffam, PhD

 \oplus

 \oplus

Cornell Cooperative Extension of Suffolk County (NY))

PRB INSTALLATION METHODS – INJECTION

Injection Wells

- + No depth restrictions (if rig can advance to)
- Fixed locations / intervals

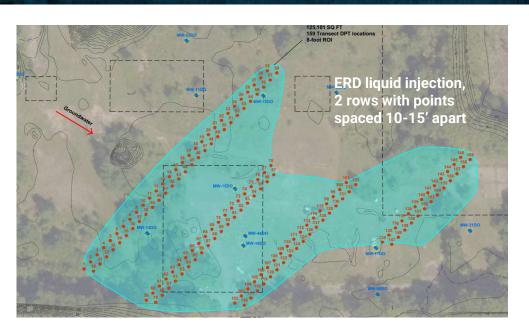

Direct Push Injection Points

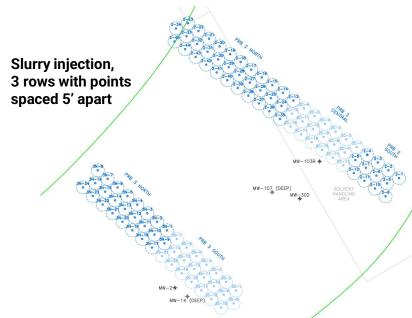

- + Flexible locations / vertical intervals
- Drilling restrictions

PRB INSTALLATION METHODS - INJECTION

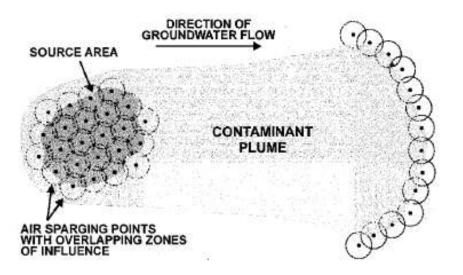

- Rows (1, 2, 3...) PRB residence time, access
- Point spacing liquid vs. solid slurry

SPARGING

- Application of a gas to enhance biodegradation of contaminants
 - Air and/or oxygen
 - Methane, propane, butane

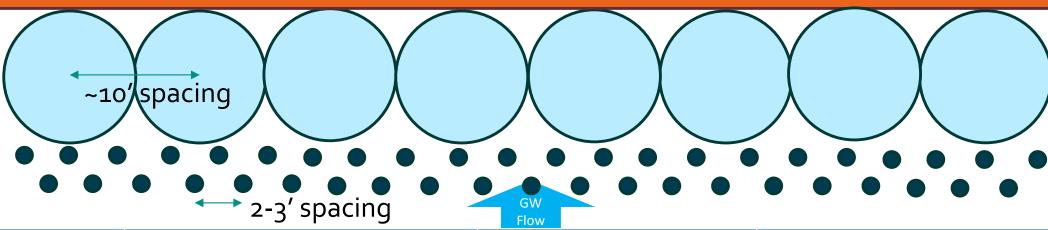

Biosparge Curtain is permeable, reactive, & a barrier

Figure 4.8 Air sparging point locations in a source area and in a curtain configuration.

PRB INSTALLATION METHODS - INJECTION

	Trench	Backfilled Boreholes	Injection Points
Benefits	-Continuous barrier -Longevity (15+ years) -Near surface water	-No depth restrictions -Longevity (10-15+ years) -Near surface water	-Larger residence time -No depth restriction -Less disturbance
Challenges	-Depth limitations -Larger equipment / Dewatering -Small residence time	-Small radius / residence time -Installation time	-Longevity (3-7+ years) -Set-back from surface water

FAVORABLE CONDITIONS

- Access
- Groundwater seepage velocity
 - Not too fast, not too slow (0.1 to 1-2 ft/d)
- Groundwater contaminant flux
 - Moderate to high
- Contamination vertically characterized

UNFAVORABLE CONDITIONS

- Above ground features
 - Buildings, surface water
- Subsurface Utilities
- Low permeability soils
 - <10⁻⁴ cm/s
- Groundwater seepage velocity
 - Slow (<0.1 ft/d)
 - Fast (>5 ft/d)
- Low contaminant flux

PRB DESIGN - DIMENSIONS

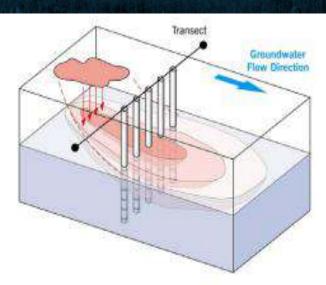

- Length (perpendicular to groundwater flow)
 - Identify where PRB would support remedial goal(s)
 - Access

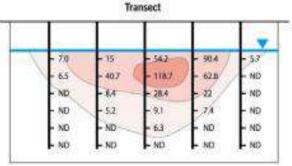

Vertical

Identify where PRB would intercept flux

Width

- Provide adequate residence time
- Account for variations in groundwater flow direction and hydraulic conductivity

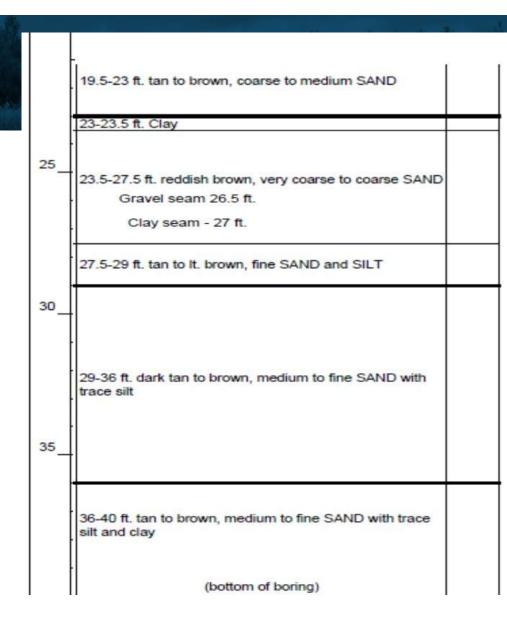

Source: Use and Measurement of Mass ⁵ Flux and Mass Discharge (ITRC, 2010)

www.isotec-inc.com

PRB DESIGN - HYDROGEOLOGY

- Geology and hydrogeology need to be understood laterally & vertically
 - Can vary across length of PRB
 - Groundwater velocity
 - Groundwater flow direction
 - Contaminant flux
- Not homogeneous environments

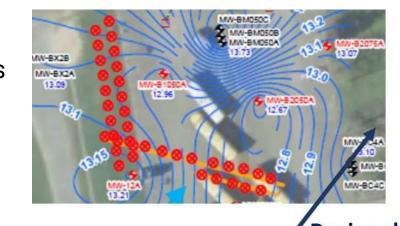

www.isotec-inc.com

PRB DESIGN - HYDROGEOLOGY (CONTINUED)

- Groundwater velocity (vs)
 - Hydraulic gradient (i)
 - Site-specific estimate using monitoring wells (for 1 event)
- Hydraulic conductivity (K)
 - Should obtain site-specific estimates using pumping tests or rising head/falling head tests
- Porosity (h)
 - 0.2 0.35
- Groundwater flow direction
 - Minimum of 3 wells oriented as a triangle

PRB DESIGN - REAGENT DOSAGE

- Contaminant Flux
 - Stoichiometry, bench-scale testing
- Non-target demand
 - Soil oxidant demand
 - Terminal electron acceptors
 - Other metals
- Over-dose vs. under-dose
 - Longevity / effectiveness
 - Cost, byproducts

FULL SERVICE ENVIRONMENTAL REMEDIATION SINCE 1995

PRB DESIGN - INJECTION VOLUME

- Increased injection volume results in improved distribution and contaminant treatment
- 10% to 30% of total estimated pore volume within the PRB
- Site-specific considerations
 - Reagent type
 - Soil type/permeability
 - Injection depth
 - Subsurface utilities

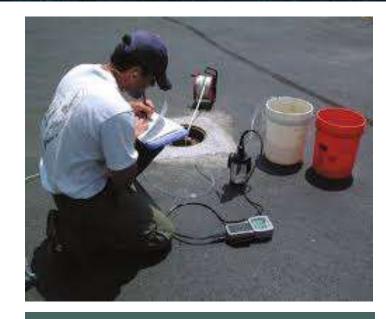

FULL SERVICE ENVIRONMENTAL REMEDIATION SINCE 1995

PRB PERFORMANCE MONITORING

- Monitoring wells support understanding of treatment efficacy and when reagent needs to be replenished.
- Monitoring wells need to be located downgradient of PRB & at reasonable distances
- Contaminant(s) of concern
- Degradation products of remediation reagent
 - ERD carbon substrate -> total organic carbon
 - Sodium Persulfate -> sulfate & sodium
- Reaction Products
 - Metals
 - Reductive Dechlorination: lesser chlorinated products

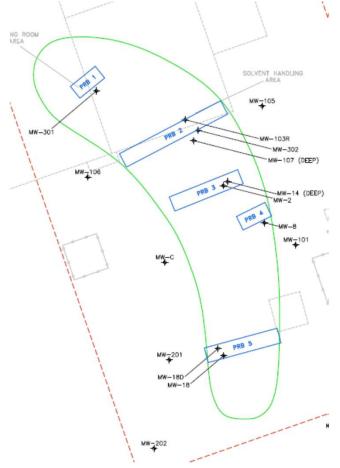

Water quality field parameters (pH, DO, ORP)

ARE REALLY IMPORTANT!

PRB EXAMPLES - DPT INJECTION POINTS

3-acre plume

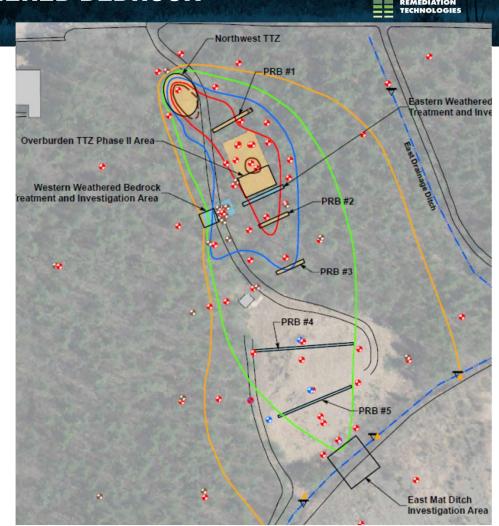

www.isotec-inc.com

FULL SERVICE ENVIRONMENTAL REMEDIATION SINCE 1995

PRB EXAMPLES - OVERBURDEN & WEATHERED BEDROCK

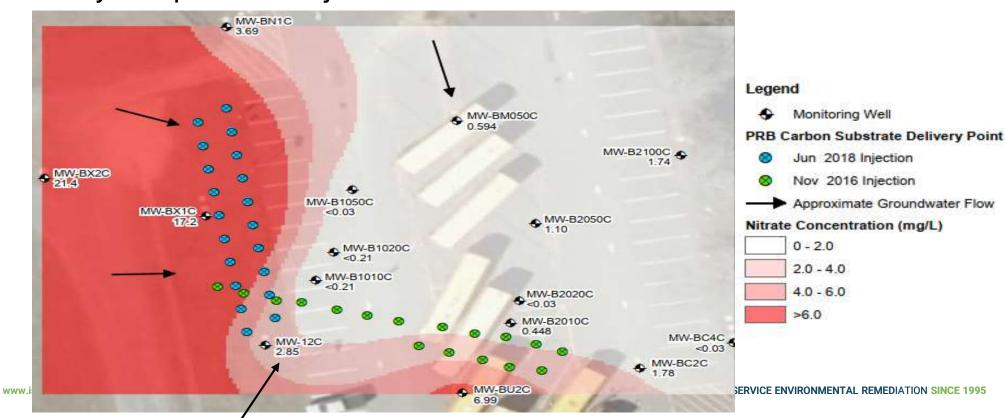

- PCE plume in overburden and weathered bedrock
- Selected Remedy = enhanced reductive dechlorination
- Full Scale Treatment
 - Source area: injection point grids
 - 5 PRBs
 - 74 direct push injection points in overburden
 - 51 injection wells in weathered bedrock

PRB EXAMPLES - INJECTION POINTS FOR NITRATE

~5 years post EVO injection

LESSONS LEARNED – GW FLOW DIRECTION

- Site-specific features influence groundwater elevation and flow direction
 - Stormwater retention tank, irrigation well, leachfield

LESSONS LEARNED – GW FLOW DIRECTION

Groundwater flow direction can vary seasonally

October

January

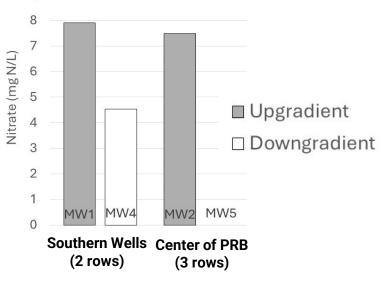

LESSONS LEARNED: INJECTION ROWS

- Multiple rows recommended
 - Minimize contaminant flowing through barrier without reaction
 - Increase residence time (safety factor)

Wood Chip Borehole Denitrification PRB 1-month post installation (high tide)

FULL SERVICE ENVIRONMENTAL REMEDIATION SINCE 1995

LESSONS LEARNED: WHEN TO REFRESH?

- Reagent consumed
- Contaminant degradation effectiveness / breakthrough
- Water quality parameters
 - For Anaerobic Barrier DO, ORP, electron acceptors (e.g., sulfate)

PRB SUMMARY

- Wide array of PRB options
- Small remediation footprint
- Cost effective groundwater treatment approach for large plumes
- Groundwater flow direction, velocity, and vertical contaminant distribution critical to design
